ECTOTHERM BOOSTER SAVES BABY BLUE TONGUE LIZARD

BEFORE

CONDITION

"We have a few variety of skinks and we produce a few litters of skinks including blue tongued lizards every season and on occasions we see twins, often excited but usually ends up with one or both siblings passing away due to their lack of size, strength, robustness and not being switched on to feeding."

SOLUTION

"We added Vetafarm Ectotherm Booster (previously known as HerpaBoost) into our feeding routine for one of these small struggling twin survivors who was around a third of the size of the rest of the litter. It was reluctant to feed no matter what we offered it.

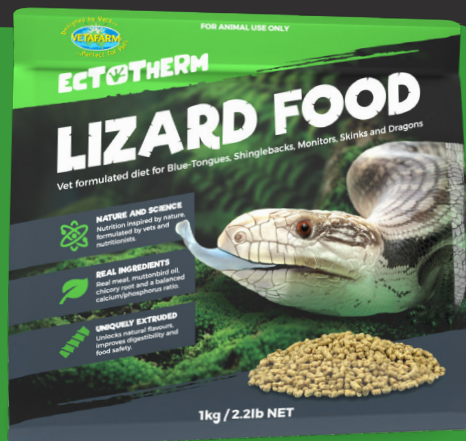

We offered 3g of **Ectotherm Booster** and placed it into the blue tongue's mouth on a daily basis for around 5-7 days. Around day 6 it seemed to trigger a typical blue tongue response to food - it ate quickly put on weight and size.

I can honestly say in my 40 odd years of keeping reptiles I've never seen such a turn around and was amazed how it has helped this little blue tongue to survive."

I must admit, we were very skeptical at first about Ectotherm Booster but, as always, we are willing to try new therapies to enhance the wellbeing of the animals we keep. Thanks, and it will be kept close for any future use!"

AFTER

By **Peter Birch**
CrittaCam Presenter, Reptile Breeder and Co-Author of The Complete Children's Python

LIZARD FOOD

Extruded diet ensures optimum digestion, high palatability and safety.

Balanced Ca:P ratio for growth, development and ongoing health.

Veterinary formulated and scientifically balanced diet.

Ectotherm Lizard Food provides lizards with a high-quality diet that is balanced with the correct vitamins, minerals and other essential nutrients. The vitamins and minerals are scientifically balanced by veterinarians and nutritionists with a focus on the calcium to phosphorus ratio (Ca:P). The calcium to phosphorus ratio is critical to ensure normal growth, development, and ongoing health, as deficiencies or imbalance can lead to health issues and diseases such as MBD.

INSECT FOOD

Substantially increases the nutritional value of insects fed to reptiles.

Helps to improve the nutrition and productivity of breeder colonies.

Primary food source for crickets, mealworms and other insects.

Insects naturally lack important nutrients required in reptile diets, such as calcium and vitamins. Insect Food provides high levels of protein, vitamins and minerals in a complete, veterinary formulated food.

MULTICAL DUST

Enriches food with easy sprinkle on application.

Includes calcium, vitamins, minerals and amino acids to support general health and wellbeing.

High quality calcium supplementation may assist in the prevention of deficiency related disease such as MBD where levels may be low.

It can be difficult to know exactly what vitamins and minerals and the quantity is in foods such as vegetables, fruit, and insects. Multical Dust is our all-in-one calcium, vitamin, and mineral supplement, that has been designed to be easily added to fresh food and insects and provide optimum nutrition to all reptiles.

BOOSTER

Provides a nutritional boost to underweight, juvenile and/or gravid reptiles.

Provides emergency nutrition to sick, stressed and injured reptiles.

Stimulates juvenile reptiles and difficult eaters to feed.

When reptiles are sick, stressed, or injured they may lose their appetite and require extra nutrition to prevent further decline in health. Booster has been formulated by veterinarians to help deliver the energy, vitamins, and essential amino acids necessary for recovery.

VITAMIN DROPS

Provides a high-quality range of essential vitamins.

The simple spot-on formula is effective and safe.

Formulated by vets for rapid absorption.

Vitamin deficiencies are common in lizards and snakes, causing serious health problems. Ectotherm Vitamin Drops have been designed by veterinarians to provide the essential vitamins required by reptiles.

SHEDDING MIST

Unique formula including organic polymers hydrates and conditions new skin.

May assist in the prevention of shedding issues such as constricted toes in lizards and retained spectacles in snakes.

Non-toxic formula - safe for hands and doesn't contaminate water.

Shedding Mist has been designed to aid snakes and lizards during the natural process of shedding. With a unique blend of organic polymers, Shedding Mist hydrates and softens old skin easing the shedding process, while conditioning the new skin to leave it with a healthy shine.

ENCLOSURE CLEAN

Kills bacteria, viruses and fungi on contact. Hospital grade disinfectant.

All-purpose cleaning and disinfectant spray for animal items.

Can be used for enclosures, food and water containers and decorative items.

Cleanliness and hygiene are incredibly important to the overall health of animals. Without a clean enclosure animals may fail to thrive. Enclosure Clean has been developed to be a safe and effective way to clean enclosures and remove any bacteria, fungi and viruses that may be thriving instead of your scaly friend.
