

Horsemate Stable Set Up Switching from shavings to Horsemate

STEP 1

Lay bags on stable floor.
For a 4m x 4m stable you will require approx 12-15 bags depending on depth required.

STEP 2

Cut each bag from corner to corner, activate by adding 5-7 litres of water per bag. Within 10-15 minutes the pellets will have expanded to around 3 times their original size..

STEP 3

Empty the bedding onto stable floor

STEP 4

Spread evenly

MAINTENANCE One to two bags per week will be sufficient to replenish lost bedding. Simply sprinkle new bedding with a hose or activate in a wheelbarrow. For a particularly wet horse use less water on replenishment bags. In the warmer weather we suggest dampening your bed down with a fine spray of water when required. Ensure pellets are completely dissolved before introducing your horse to their stable.
